Tee Repair Clamp

Seals a leaking tee without cutting the fitting out — the split body wraps run and branch together, the gasket following the branch profile into the crotch where tees usually fail first. Goes up to DN4000, the biggest tee clamp in the range.

Shell: Carbon Steel / Pipe: Plastic (PE/PPR/UPVC/PVC-M)

Carbon steel body provides high structural strength, suitable for both above-ground and buried installations. The EPDM gasket's pre-compression design ensures reliable initial seal on the smooth, low-compression-strength surface of plastic pipes.

Seals a leaking tee without cutting the fitting out — the split body wraps run and branch together, the gasket following the branch profile into the crotch where tees usually fail first. Goes up to DN4000, the biggest tee clamp in the range.

Shell: Carbon Steel / Pipe: Ductile Iron

Carbon steel body provides high structural strength, suitable for both above-ground and buried installations. High-torque preload against the thick-walled rigidity of ductile iron pipe creates a robust, settlement-resistant connection. The EPDM gasket compensates for minor surface irregularities common in cast iron.

Seals a leaking tee without cutting the fitting out — the split body wraps run and branch together, the gasket following the branch profile into the crotch where tees usually fail first. Goes up to DN4000, the biggest tee clamp in the range.

Shell: Carbon Steel / Pipe: Steel

Carbon steel body provides high structural strength, suitable for both above-ground and buried installations. Engineered to accommodate thermal expansion and contraction of steel pipelines while maintaining seal integrity under fluctuating service conditions.

Seals a leaking tee without cutting the fitting out — the split body wraps run and branch together, the gasket following the branch profile into the crotch where tees usually fail first. Goes up to DN4000, the biggest tee clamp in the range.
